Honourable Chair, Distinguished Delegates,

Following careful review, the WGPR\(^1\) has concluded that key aspects of emergency preparedness fall outside of the scope of the IHR\(^2\) and may be best addressed by a new instrument. As the chief representatives of the global circulatory health community, the World Heart Federation, supported by the Global Coalition for Circulatory Health and NCD Alliance, calls on Member States to adopt a Framework Convention or similar binding instrument to mitigate the impact of future pandemics on our patients.

This instrument can go far in preparing for and preventing global health emergencies by focusing on building resilient health systems through enhanced spending and policies to tackle NCD risk factors; indicators on circulatory disease in measures of pandemic readiness; access to essential health services for people living with circulatory conditions and in low-resource settings; priority vaccination for those with underlying risk factors; and new models to deliver quality care.

Thank you.
