**Re: Call to implement the Kids and Diabetes in Schools (KiDS) project in Japan**

Dear Minister Hagiuda,

On occasion of the [International Day of Education](#) on January 24, the [International Diabetes Federation](#) (IDF), the [International Society for Pediatric and Adolescent Diabetes](#) (ISPAD), the [Japan Association for Diabetes Education and Care](#) (JADEC) and the [Japan Diabetes Society](#) (JDS) are calling on you and your fellow Ministers of Education and Minister of Health around the world to implement the Kids and Diabetes in Schools (KiDS) project in your respective countries. Implementation of this project is particularly important at a time when school attendance has been disrupted in many countries and when education on healthy lifestyles is essential.

According to IDF estimates, **type 1 diabetes affects over 1.1 million children, adolescents and young adults under the age of 20. In Japan, the number of people under the age of 20 affected by type 1 diabetes is 30,000<sup>1</sup>**. People with type 1 diabetes need to inject insulin to survive. This can be a source of stigma – especially in the school environment. The general lack of awareness and understanding about the condition often leads to discrimination, which can be particularly difficult for children and adolescents with type 1 diabetes. In addition to the challenges posed by type 1 diabetes, type 2 diabetes – a condition which is often preventable and was until recently diagnosed mainly in adults – is on the rise among children and adolescents due to increasingly sedentary lifestyles.

**IDF and ISPAD created the KiDS project in 2013 to respond to the need to improve diabetes understanding in schools.** The ultimate objectives of this project are to improve the school experience of children living with type 1 diabetes, fight diabetes-related stigma and promote healthy lifestyles to tackle type 2 diabetes. The KiDS resources – developed with the input of international experts and a multi-disciplinary committee – have been translated into multiple languages and adapted to suit different cultures and environments.

To date, the KiDS project has been implemented through different models in at least nine countries<sup>2</sup>, engaging more than 189,000 children and 13,500 teachers. An assessment of the project's impact has been conducted based on the KiDS pilot experiences in India and Brazil. The introduction of the KiDS information package resulted in an improved knowledge of diabetes management among teachers and parents. In addition, it led to healthier food choices and encouraged increased physical activity in the school environment<sup>34</sup>.

**In the run-up to the International Day of Education, IDF, ISPAD, JADEC and JDS are requesting Ministries of Education and of Health to implement the KiDS project at the national level to:**

- Improve the knowledge of diabetes in the school environment among students and school staff;
- Improve understanding about the needs of students living with type 1 diabetes, in order to foster a safe and supportive school environment;
- Protect children and adolescents living with type 1 diabetes from stigma;
- Support efforts to prevent type 2 diabetes by including education on nutrition and healthy lifestyles in national school curricula.

**We encourage you to visit the [KiDS project website](#) to learn more and access our resources, including the information packs for teachers, parents and children, and the Nutriquiz designed to help students improve and test their knowledge of nutrition and healthy lifestyle choices. We also invite you to read the [IDF Recommendations to Stakeholders for the Prevention of Obesity and Type 2 Diabetes in the School Environment](#) and the [ISPAD Guidelines for Type 1 Diabetes](#).**

**We count on your leadership and that of the government of Japan** to support children and adolescents with type 1 diabetes and address the growing issue of type 2 diabetes. IDF, ISPAD, JADEC and JDS stand ready to work with you and your team to ensure the health of future generations and support the sustainable development of our societies.

Yours sincerely,

Professor Andrew Boulton  
President, International Diabetes Federation

Professor Carine de Beaufort  
President, International Society for Paediatric and Adolescent Diabetes

Yutaka Seino, M.D., PhD.  
President, Japan Association for Diabetes Education and Care

Kohjiro Ueki, M.D., PhD.  
Chair of the Board of Directors, The Japan Diabetes Society
